Who We Are

Since its inception in 2000, Tejas Group of Constructions began as a civil construction and real estate company and has now emerged as one of the fastest-growing names in real estate development.

With a proud legacy of 25 years, Tejas Group of Constructions has established itself as a leading force in building gated community projects with a reputation for transparency, integrity, and an unwavering commitment to quality.

At the helm is our Chairman & Managing Director, Mr. XXXXXXXX, a first-generation entrepreneur, Chartered Accountant by qualification, and a visionary by virtue, whose leadership continues to shape our journey forward.

General Contracting Services

One of the main services your construction company can provide is General Contracting Services. This role involves managing the overall construction process, hiring subcontractors, coordinating schedules, and ensuring that the project is completed on time and within budget. In this arrangement, the general contractor assumes the financial risk for the budget they agreed upon according to the contract.

Design-Build Services

Another fantastic service is Design-Build. I used to have a certification from the Design-Build Institute of America, and it's something I'm really passionate about. In this model, whether it's the architect or the builder, all parties are contracted under one entity. In my experience, the general contractor typically controls the process, hiring architects, engineers, and any other third parties required to accomplish the project. This one-entity model allows for a single point of accountability, which can greatly streamline operations.
